## STUDY: Out-of-hospital cardiac arrests resulting in DEATH spiked nearly 30% after COVID “vaccines” were unleashed

10/13/2023 // Ethan Huff // **1.7K** Views

In 2021, the year of the Wuhan coronavirus (COVID-19) "vaccine" – Operation Warp Speed was launched by the Trump regime in late-2020 – out-of-hospital cardiac arrests [spiked dramatically](#), a new study has found.

Data from Seattle and King County in Washington between the years of 2018 and 2021 shows a clear jump in out-of-hospital cardiac arrests immediately after COVID jabs were launched, suggesting a causative correlation between their rollout and the mass destruction of people's hearts.

The dataset included 13,081 patients, 7,102 of whom were found to already be dead by the time emergency responders arrived on the scene. Another 4,952 patients were treated by emergency personnel but died either ahead of arriving at the hospital or after arriving at the hospital.

Compared to 2018 and 2019, which the study referred to as pre-pandemic years, 19 percent more people suffered out-of-hospital cardiac arrests during the pandemic period, which was marked as the years of 2020 and 2021.

"That included a 10.8 percent increase in those who survived until responders arrived and a 27.2 percent increase in patients declared dead when responders reached the patients," the *Epoch Times* reported.

## It wasn't COVID that killed all these people – it was the JABS, either directly or through shedding

In the age category of 18 to 64, there was actually an increase in the overall number of patients who survived out-of-hospital cardiac arrest, even though the overall *percentage* of people in this age group who suffered out-of-hospital cardiac arrest was also much higher during COVID than prior.

The rate of surviving patients in the 65-plus category remained steady both pre-pandemic and during the pandemic, though the overall *percentage*, like in the 18 to 64 group, of out-of-hospital cardiac arrest incidents increased in the pandemic period compared to the pre-pandemic period.

A slight increase in out-of-hospital cardiac arrests was recorded in 2020 before the launch of Operation Warp Speed. Then in 2021 after its launch, the highest number of out-of-hospital cardiac arrests was recorded.

In this particular study, researchers did not record vaccination status of the victims, so we do not know how many of those who suffered an out-of-hospital cardiac arrest got the jabs. However, what we do know is that there were *many* more out-of-hospital cardiac arrest events *after* the shots were unleashed compared to prior.

Of those who suffered an out-of-hospital cardiac arrest during the pandemic and who survived at least until emergency responders arrived, some 6.2 percent tested positive for the "virus" in the two weeks leading up to suffering a cardiac incident. This suggests that COVID itself was not necessarily the cause, but rather COVID jabs.

Just 3.7 percent of a random sample of patients who were declared dead upon arrival by emergency responders tested positive for COVID, showing an even lesser connection between the "virus" and the cardiac event, and more of a connection between the shots and the cardiac event.

Prior to the pandemic, 42.6 percent of people who suffered an out-of-hospital cardiac event survived and made it to the hospital for treatment. In 2020 and 2021, that figure dropped ' just 35.7 percent.

"And compared to 2018 and 2019, when 19.2 percent of the patients survived to hospital discharge, just 15.4 percent of patients were discharged alive during the pandemic," the

pegged it as responsible for 18.5 percent of the downturn."

It is unfortunate that the researchers behind this particular study failed to evaluate the possible impact of COVID injections on these phenomena, especially since COVID jabs have already concretely been linked to myocarditis, heart inflammation and other cardiac events.

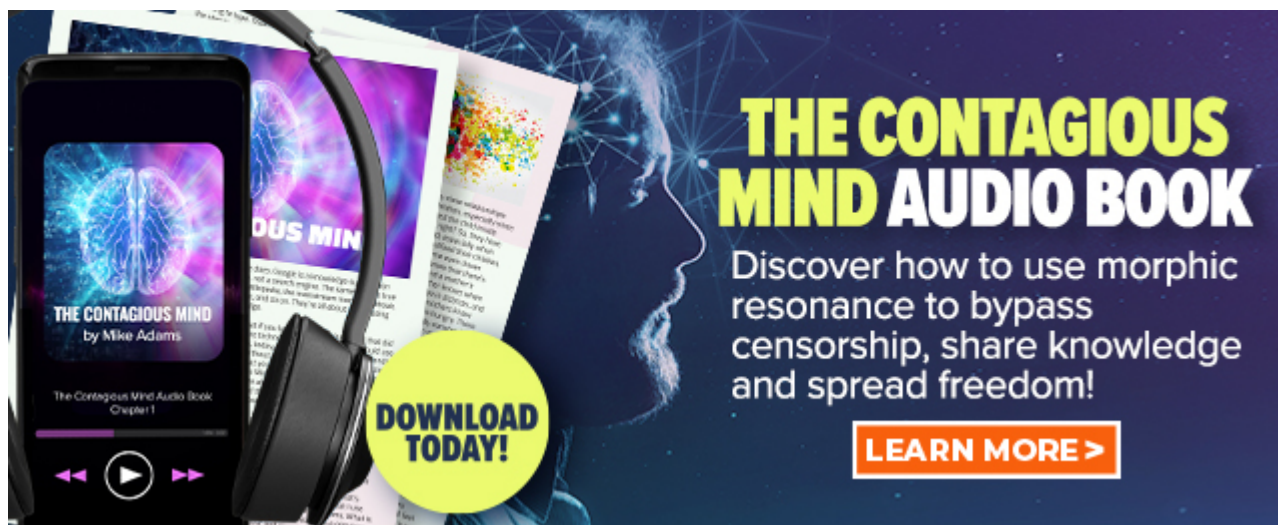

The COVID jab holocaust has only just begun. Learn more at [Genocide.news](#).
